{jkefel title=[IBC Loading using Vacuum Transfer] kefelui=[sliders]}

There are various methods for loading material into an IBC or bulk container. One of the most efficient and cost effective methods is the use of a well designed vacuum transfer system.

Vacuum transfer into an IBC offers a reliable dust-tight transfer that is highly flexible and easily adapted to various process changes. Using vacuum transfer is an ideal material handling solution where there is restricted space above the IBC. Even in tight spaces, loading rates of 1,000 kg per hour are often possible.
